4. ENGLISH LANGUAGE TRANSLATION OF
AMENDED CLAIMS (ART. 19 PCT)

CLAIMS

- 1.) Fishing rod float, of the kind used in order to prevent the fishing line from sinking and marking the fishing point, characterised in that the float is made up of a part or semipart (1) of the body of the float and another semipart (2), which respectively include a lengthways groove (3,4), where one of the semiparts (1) is provided with projections (5), which run partially along the length of said semipart, and the second semipart (2) is provided with a slotted area (6), which also runs lengthways with the axis of the semipart (2) but partially, as well as this slot (6) including a stopper (7), which acts against the end of the projection (5) when said projection is inserted.
- 2.) Fishing rod float according to the first claim, characterised in that the slot (6) corresponds with the projection (5) of the other part, in size and proportions, so that it facilitates sliding one part into the other by way of the arrangement of this system, constituting a track guide system.
- 3.) Fishing rod float according to the first claim, characterised in that the arrangement of the lengthways groove (3) of semipart (1), corresponds with the groove (4) of semipart (2), so that, once united, they form the orifice through which the fishing line is to slide, and through which the fastening rod is introduced.
